

Name of the Faculty Member: Prof. Anju Verma
Name of Activity: Magic Tiles (Simulated)
Name of Course/PAPER: MPOB
Semester: II

Brief Description

Participants: Two Groups of 12-15 Students and Observers.

Observers: A total of 3-5 students would be the observers and observe the behavior of Both Groups.

Objective and Brief Description: The basic objective of this activity is to make students understand about the concepts of management. The groups of students pretend to visit a company of hazardous chemical. They are given instructions for not to touch the chemical (in a drum) as the chemical is risky. However, some notorious students touch the drum and chemical falls on the floor. This creates a problem for them, as they are not able to cross the chemical because of its trait of invisibility. The groups are asked to make their strategies to come out of that chemical with the help of magic tiles.
